A general Description of the four parts of  
the Year; and first of the *Spring*.

**T**he *Spring* beginneth with the Suns ingress into the first minute of the Equinoctial Signe Aries which happens with us upon Munday the 10 of March 29 min. past 6 in the morning; and continueth the Sunn's course through Aries, Taurus, and Gemini, and causeth equal day and night to the inhabitants of the whole Earth. Now he taketh his leave of the Southern, and beginneth to send forth his comfortable influence to the Northern part of the world.

Of Summer.

**T**his Quarter beginneth with the Sun's entrance into the first scruple of the Tropical Signe Cancer, being this year upon Wednesday the 11 of June, 26 min. past 9 in the morning, and continueth the Sun's itneration through Cancer, Leo, and Virgo. At this time the Sun maketh his neereſt approach to our South, having the greatest North declination from the Equinoctial, thereby causing the longest day, and shortest night in the Northern Hemisphere. About this time the Sun is in his Apogeeon, or point farthest distant from the Earth.

Of Autumn.

**T**his Quarter begins with us on Saturday the 13 of September, 28 min. past 1 in the morning; at what time the Sun passeth into the Equinoctial Signe Libra, thereby co-equating the days and nights throughout the whole world, being once more bifrontal, and equally radiating to the Arctick and Antarctic Poles; and continueth his perambulation through Libra, Scorpio, and Sagittarius.

# Wood-house 1662.

Of Winter.

**T**his Quarter takes beginning at the Suns Ingress into the first scruple of the imaginary sign Capricorn, which hapneth this year on Thursday the 11 of December, seven minutes past noon, and continueth the Suns progress through Capricornus, Aquarius, and Pices; being now in his greatest distance from our Zenith, and obliquity from the Equinoctial, causing the shortest day & longest night to the Northern Hemisphere.
